***General Hardware Note:** The Factory Default button can be used to restore settings of an iCAM7000 series camera to the factory default values. This full factory default resets ALL settings and software to the factory

default. Any information, uploaded information (including firmware/software updates) to the unit that may have been performed prior to this reset function may be cleared. All settings will be factory restored to the default level. If the iCAM Software was upgraded from the original factory version, any/all upgrades would need to be re-applied as needed.

This Factory button is located inside of the unit below the RTC battery. (Reference the iCAM7000 Series Hardware Guide for details information.)
